

HORIZONTAL WATER SAMPLE

Intended for shallow or deep waters, these bottles are called "horizontal" because they descend horizontally, parallel to the bottom and are pulled sideways about one meter before closing. This ensures a representative water sample for specific depths. They are ideal for sampling of narrow stratification layers, especially at the thermo cline, or just above the bottom sediments. These popular and versatile bottles come in transparent acrylic. the acrylic allows you to view the bottle contents immediately.

Specification:

Material : Bottle (transparent acrylic), End Seal (synthetic blue rubber resist decay), Air/drain valve (Plastic POM), Trip Assembly (High Quality Plastic MC and Stainless), Cable Assembly (Stainless Steel) handle (Stainless Steel) Line all materials resists from corrosive water.

Accessories : Messenger (300 gr), and Line (20 meter), Carrying case

Dimensions :

Models	I	II	III
Capacities (liter)	2.2	3.2	4.2
Bottle Diameter (cm)	12	12	12
Bottle Length (cm)	32	40	50
