

HAZ-DUST HD-7204 PARTIKULAT METER

The HAZ-DUST 7204 is an instrument for concurrent dust monitoring and gravimetric dust sampling. Its large colour touch screen shows a real time graphical display of airborne particulate concentration in the breathing zone. By combining a flow compensated pump for gravimetric sampling with an optical sensor for particulate monitoring the HAZ-DUST 7204 removes the need for two separate devices.

Feature

1. Easy touch screen operation
2. Instantaneous, continuous display of TWA, STEL, Minimum, Maximum concentration in mg/m³
3. Sensor mounts directly in the breathing zone for a personal sample
4. Interchangeable sampling inlets for Inhalable, Thoracic and Respirable measurement
5. Can accept pre-weighed and preloaded 25 or 37 mm filter cassettes
6. Small and lightweight with integral belt clip
7. Operates for over 22 hours using rechargeable Li-Ion battery
8. Automatic data logging
9. Multiple language options
10. Easy to use DustComm Pro Software for data downloading, trend analysis and comprehensive reporting of concentration changes over time
