

VERTICAL WATER SAMPLER

Vertical Water Sampler is the bottle to use in mildly corrosive waters, in marine waters and in water with large amounts of suspended solids or adhesive colloidal solids. Larger bottles are especially good for collecting small plankton. The wide mouth collects a true water sample with no contamination from other water levels. During descent, the open mouth does not restrict water flow. This makes them particularly suitable for collecting plankton, floating sediments and for use where metallic ion avoidance is desirable.

Specification:

Material : Bottle (transparent acrylic), End Seal (black rubber resist decay), Air/drain valve (Plastic MC), Trip Assembly (High Quality Nylon and Stainless), Cable Assembly (Stainless Steel) handle (Stainless Steel)
 Line all materials resists from corrosive water.

Accessories : Messenger, Line (20 meter)

Dimensions :

Models	I	II	III
Capacities (liter)	2.2	3.2	4.2
Bottle Diameter (cm)	12	12	12
Bottle Length (cm)	32	40	50
